LISTING OF THE CLAIMS

A complete listing of the claims is provided below. This listing of claims will replace all prior versions and listings of claims in the application.

Patent

1. (Currently Amended) A Ttransponder circuit with a resonator with a high quality factor (8) and a demodulator (7), whereby an AM-modulated signal that is transmitted by a transmitter/receiver device (2,3) and that after its demodulation has a frequency for exciting the resonator with a high quality factor (8) that corresponds to the resonance frequency of the resonator with a high quality factor (8), characterized in that wherein

said transponder circuit additionally has a rectifier (9), an energy store (10), and a semiconductor circuit (11) that are downstream of said resonator and the input impedance of said resonator with a high quality factor (8) is matched to the load impedance of said semiconductor circuit (11) such that a supply voltage is obtained for said semiconductor circuit (11) in said energy store (10) by impedance transformation.

- 2. (Currently Amended) <u>The</u> <u>Ttransponder circuit in accordance with claim 1, characterized in that</u>-further comprising
 - a broadband signal is used for exciting configured to excite said resonator.
- 3. (Currently Amended) <u>The Ttransponder circuit in accordance with claim 1, characterized in that further comprising</u>
 - a two-tone signal is used for exciting configured to excite said resonator.
- 4. (Currently Amended) <u>The Ttransponder circuit in accordance with claim 1, characterized in that wherein</u>

the frequency of the excitation signal is matched to the resonance frequency of said resonator (tracking).

5. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that-wherein

- a quartz is used as resonator with a high quality factor.
- 6. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of elaims 1 through 4,

characterized in that-wherein

- a piezoelectric resonator is used as resonator with a high quality factor.
- 7. (Currently Amended) <u>The</u> <u>Ttransponder circuit in accordance with claim 6, characterized in that wherein</u>
- a piezoelectric resonator made of langasite is used as resonator with a high quality factor.
- 8. (Currently Amended) <u>The</u> <u>Ttransponder circuit in accordance with claim 6, characterized in that wherein</u>
- a piezoelectric resonator made of gallium orthophosphate is used as resonator with a high quality factor.
- 9. (Currently Amended) <u>The</u> <u>Ttransponder circuit in accordance with claim 6, characterized in that wherein</u>
- a piezoelectric resonator made of lithium niobate is used as resonator with a high quality factor.

10. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

an LC oscillating circuit is used as resonator with a high quality factor.

11. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

a ceramic resonator is used as resonator with a high quality factor.

12. (Currently Amended) The Ttransponder circuit in accordance claim 1 with any of claims 1 through 4,

characterized in that wherein

a cable resonator is used as resonator with a high quality factor.

- 13. (Currently Amended) The Ttransponder circuit in accordance with claim 1 wherein any of claims 1 through 4, characterized in that a dielectric resonator is used as resonator with a high quality factor.
- 14. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

acoustic resonators are used as resonators with a high quality factor.

15. (Currently Amended) <u>The</u> <u>Transponder circuit in accordance with claim 1 any of claims 1 through 4,</u>

characterized in that wherein

an antenna is used as resonator with a high quality factor.

16. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

tuning-fork oscillators are used as resonators with a high quality factor.

17. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

mechanical oscillators are used as resonators with a high quality factor.

18. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

ferrimagnetic resonators are used as resonators with a high quality factor.

19. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1 through 4,

characterized in that wherein

resonators working with magnetostatic waves are used as resonators with a high quality factor.

20. (Currently Amended) The Ttransponder circuit in accordance with claim 1 any of claims 1-through 19,

characterized in that wherein

the stored data are used for calibrating sensors.
